**Subject:** News on First-Class Learning, Dan's Bright Idea and National Electrical Safety Month

May 2009

## First-Class Learning Requires Top-of-the-Line Infrastructure!

As BJC HealthCare prepared to open its new 83,000-square-foot BJC Learning Institute, Schaeffer Electric stepped up to install power service and high-tech audio-visual gear.

Located in a seven-story high-rise in Brentwood, Mo., the BJC Learning Institute advances BJC's commitment to learning and innovation for better health and better health care by focusing on five areas: management skills, process improvement, leadership development, clinical professional skills and personal career development.

For optimal learning, Schaeffer's data and communication division outfitted the facility - which spans four floors and includes 27 rooms plus a 220-seat auditorium - with an array of electronics including six flat-panel televisions, 28 Sanyo projectors and 28 Draper projection screens. Crews also installed wiring, conduit and lighting fixtures.

Thanks to Schaeffer Electric, BJC's state-of-the-art learning center now has the high-tech infrastructure it needs to advance healthcare in St. Louis for years to come!

## Dan's Bright Idea

*Do the right thing!*

It sounds simple enough, but geeez... some people quickly forget their mother's words of wisdom.

Doing the right thing feels good! Doing right by my customers and my employees year after year has paid off ten-fold in loyalty and trust.

At Schaeffer, we recently lowered our residential and commercial service rates to continue great service at a more affordable rate.

You're my friend, so I'm sure you're already doing the right thing. If you have room for improvement, what can you do differently?

## May is National Electrical Safety Month

*Homeowner tips to prevent electrical fires*

A 2008 study by the **Fire Protection Research Foundation** notes that aging homes are increasingly susceptible to electrical fires because of improper installation and failure to meet the **National Electrical Code**. Plus, electrical systems installed decades ago are often overburdened with high-energy household appliances and electric devices.
